Preator Consulting, LLC, is a fully licensed and insured civil engineering firm with engineering business licenses throughout the Las Vegas Valley and registration with the state of Nevada. Created out of need to provide closer relationships between engineers and clients, Preator Consulting works to streamline projects by developing a bond and communication route between parties and making as many factors known at inception as possible.

In the past 20 years, the principals at Preator Consulting have planned, mapped and engineered tens of thousands of acres of commercial, industrial and residential properties throughout the mountain states. We provide small-scale properties with full engineering services, taking projects from idea to construction with thorough planning, traffic/drainage studies, improvement plans and construction documents.

With property values in Las Vegas escalating in the past few years in a tightening market, knowledge about

potential sites is more critical than ever. A building is not complete without all factors being considered, so Preator Consulting properly evaluates all internal details, such as material handling, process flow and wet stations. We offer researching of all aspects of the development process because knowing the limitations of a property prior to setting schedules is a must in the current economy. Our architect partner has designed everything from simple patios to multimillion-dollar estates. We also provide project management services to guide clients through the maze of permits, contractors and inspections.

Preator Consulting also works with clean-up, construction and insurance companies in the wake of manmade and natural catastrophes. We evaluate damage caused to structures and their foundations, provide design drawings/calculations and facilitate coordination with permitting agencies to accommodate expedited schedules.
